EDUCATION

University College London Sep 2024 – Sep 2025
MSc Artificial Intelligence and Data Engineering, Merit London, UK

- Relevant Coursework: Software Development Practice, Requirements Engineering and Software Architecture, Engineering for Data Analysis, Introduction to Machine Learning, Applied Deep Learning

Queen Mary, University of London Sep 2021 – Jun 2024
BSc Computer Science, First Class Honours London, UK

- Relevant Coursework: Algorithms and Data Structures, Software Engineering, Object-Oriented Programming, Web Technology, Distributed Systems, Database Systems, Big Data Processing

SKILLS

Languages: Python, Java, Go, C#, SQL, PHP
Web & Frameworks: React, Django, JavaScript, HTML, CSS
AI & Data: PyTorch, TensorFlow, Pandas, NumPy, Matplotlib, Hadoop, Spark
DevOps & Cloud: Docker, Kubernetes, Terraform, Ansible, Git, BeeGFS

EXPERIENCE

AI Software Engineer Jun 2025 – Sep 2025
International Federation of Red Cross and Red Crescent Societies London, UK

- Engineered and deployed LLM-based summarisation modules within the IFRC GO platform using Python and the Azure OpenAI SDK to extract and summarise insights from emergency reports
- Reduced emergency report processing time from hours to minutes by integrating Azure OpenAI LLM flows into legacy systems, accelerating decision-making speed across global operations
- Enhanced platform's capability to process large-scale unstructured data and support real-time operational learning and critical decision-making during humanitarian emergencies

Teaching Assistant Sep 2022 – Dec 2022
Queen Mary, University of London London, UK

- Guided 50+ students in understanding Computer System and Network concepts such as binary representation and assembly language
- Enhanced student comprehension by simplifying complex computing concepts, ensuring accessibility for learners from diverse backgrounds

PROJECTS

Distributed Data Automation (*Python, Terraform, Ansible, Spark, BeeGFS)* Jan 2025 – Apr 2025

- Provisioned a scalable distributed data processing pipeline across a 5-node cluster leveraging Terraform for infrastructure provisioning and Ansible for configuration management
- Applied Spark's Alternating Least Squares (ALS) algorithm to perform collaborative filtering and machine learning analysis, leveraging BeeGFS for high-throughput parallel file storage
- Deployed Prometheus and Grafana dashboards for real-time monitoring and system metrics visualisation
- Secured cluster access using SSH keys and implemented host-based firewall rules
- Achieved 35-hour continuous data processing with zero system downtime during load test

Reddit Sentiment Summariser *(Python, Django, HTML, CSS, JavaScript, SQL)* Sep 2023 – Jun 2024

- Developed an interactive web application for analysing Reddit content, implementing VADER for sentiment analysis and Pegasus-X for text summarisation, enabling toxicity detection across multiple subreddits
- Automated data mining through RESTful APIs, retrieving and processing 100+ Reddit posts per day
- Refactored a scalable Django backend, reducing API response latency by 30%
- Secured user data with SQL-based authentication and data storage workflows, ensuring robust access control

Portfolio Website *(React, JavaScript, SCSS)* Sep 2022 – Sep 2022

- Built and deployed a responsive portfolio web application using React, JavaScript and SCSS, ensuring cross-browser compatibility and optimised performance
- Configured continuous integration and continuous deployment (CI/CD) using Netlify for automated updates
